What We Help Enterprises Deliver

Cloud Application Engineering

Architect and modernize core systems with cloud-native platforms, microservices, and DevSecOps pipelines built for enterprise scale and continuous delivery.

Data & Analytics

Transform raw data into strategic assets through unified data platforms, real-time analytics pipelines, and AI-ready architectures that drive decisions at scale.

M&A Integration

Accelerate post-merger technology integration with tested frameworks that minimize disruption, de-risk cutovers, and realize synergies at pace.

Global Capability Centers

Design, stand up, and operate GCCs that deliver engineering excellence, governance maturity, and measurable ROI from day one.

Managed Services

SLA-backed managed operations spanning infrastructure, applications, and security - freeing enterprise teams to focus on innovation over maintenance.

AI Services

From strategy to deployment, our enterprise AI platform help enterprises activate AI where it creates the most value - embedding intelligence into core processes, products, and decisions at scale.

Accelerators That Compress Time-to-Value

Mirror Validation

End-to-end validation framework that detects issues across the migration lifecycle before production impact.

Data Fabric Extension

Enables secure, scalable integration across complex enterprise systems with seamless BOT handover models.

Data Ingestion Frameworks

Enterprise-grade ingestion supporting any source, format, or volume at scale.

Test Data Generator

Intelligent synthetic data generation to accelerate development and testing cycles from day one.

Enterprise Platforms We Specialize In

Salesforce - End-to-end transformation across Sales, Service, and Marketing Clouds with Einstein AI automation. 200+ consultants | 8+ years experience.

SAP - ERP modernization, S/4HANA cloud migration, Fiori integration, and real-time business intelligence.

Oracle - BRM & ECE implementations, Quote-to-Cash optimization, OCI, and Fusion ERP with high availability and disaster recovery.

Our Delivery Credentials

Global delivery model

Presence across the US, Brazil, Chile, UK, Australia, and India with 24/7 coverage and multilingual capability (English, Portuguese, Hindi).

Deep technical capability

300+ certified professionals across AWS, GCP, and Azure, covering full-stack development and infrastructure.

Structured delivery governance

Dedicated KR Elixir delivery manager per engagement with proactive risk management and transparent performance tracking.

Compliance-first execution

FINRA, HIPAA, GDPR, SOC 2, and ISO 27001 embedded from sprint one, not retrofitted.

Proven execution maturity

200+ successful deliveries, 98% retention, and recognition among high-growth enterprise technology partners.

Success Stories

Financial Services

Modernized legacy mainframe environments spanning 7+ years of operations. GCP-based migration enabling sub-second API performance with zero production incidents across 50+ programs.

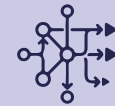

Financial Services - Latin America

Migrated four mission-critical AS400 applications to GCP with zero business disruption, supported through a government-backed transformation initiative delivering significant cost efficiencies.

Healthcare

Executed three concurrent M&A integrations into AWS with full data centre decommissioning completed in under 8 months and zero disruption to patient services.

Travel & Hospitality

Delivered full API gateway modernization with controlled migration, minimal downtime, and planned decommissioning of legacy infrastructure.

Retail

Implemented AI-driven customer service platform reducing L1 ticket volume by 60% and delivering approximately 40% annual operational savings.

Global Restaurant Operator

Enabled cloud migration and unified analytics platform providing real-time operational visibility across thousands of global locations.

Insurance

Cloud transformation resulting in 30% cost reduction, 50% latency improvement, and deployment of fraud detection models in production.

Oil & Gas

Implemented Vertex AI-powered predictive maintenance systems reducing operational downtime by 30% and enabling real-time IoT analytics.

Media & Entertainment

Built multi-cloud API frameworks enabling real-time data pipelines for large-scale personalization and content delivery.

Telecom

Delivered end-to-end billing platform via Build-Operate-Transfer model with fully managed 24/7 global application operations.
